Mexico

Frontend developer with 4 years of experience building production React applications. Specializing in TypeScript, state management (Redux Toolkit, Zustand), and complex form/data workflows. Shipped payment integrations, internationalized platforms, and data-heavy dashboards across two product teams.

EXPERIENCE

Frontend Developer

Boletia — Ticketing & events platform

Aug 2022 – Sep 2025 · 3 yrs

Payouts — Disbursements Platform

- **Migration:** Migrated the codebase from CRA to Vite and introduced TypeScript incrementally, reducing build times and improving developer experience.
- **Data layer:** Refactored the API layer to RTK Query (cache, tags, invalidations), eliminating duplicate network requests and reducing API-related bugs.
- **Dashboards:** Built financial reporting UIs with server-side pagination, sorting, and filtering; added CSV/XLS/TXT export, bulk actions, and approval flows.
- **Forms & validation:** Delivered complex forms with react-hook-form + Yup (conditional logic, masks, i18n validation), cutting user-reported validation errors.
- **i18n:** Integrated i18next with automatic locale detection; standardized number/date/currency formatting across Spanish and English.
- **Auth & security:** Implemented route guards, auth flows, and reCAPTCHA v3 to prevent automated sign-ups.

Admin — Platform for Event Organizers

- **Campaigns:** Built balance top-up with Stripe Payment Intents & Elements; designed campaign creation with suggested budgets, feature flags for gradual rollout, and analytics instrumentation on critical flows.
- **Custom links:** Developed dynamic validated forms (per-event limits, DST-aware dates, name sanitization) with group editing, normalized API payloads, and i18n copy UX.
- **Holds & comps:** Implemented seat holds with Seats.io maps, batch complimentary ticket generation (≤ 500), availability-based UX confirmations, and stateful edit flows.
- **Check-in:** Built real-time check-in with debounced search, cursor-based pagination, per-checkpoint ticket mapping, and unified error handling with i18n codes.
- **Observability:** Instrumented product events with PostHog on key CTAs; used tester-controlled feature flags to de-risk releases.

Frontend Developer

CASAI — Hospitality & short-term rentals

Oct 2021 – Aug 2022 · 10 mos

- **Payments:** Implemented a unified payment flow supporting PayPal.
- **Design system:** Contributed to a shared component library with standardized styles, improving UI consistency across the product.
- **Search:** Enhanced the property search page (filters, calendar, map) to support marketing campaigns and improve conversion.
- **DX:** Built reusable hooks, typed utilities, and applied lazy loading, context patterns, and CMS integration.

CORE STACK

React 18 TypeScript JavaScript ES6+
Vite Next.js Astro

LIBRARIES

Redux Toolkit / RTK Query Zustand
React Router v6 react-hook-form MUI
Framer Motion i18next Yup dayjs
tiptap

TOOLING & INFRA

Git ESLint Prettier AWS Amplify
Sentry PostHog Stripe REST APIs

WORKFLOW

Jira Confluence Figma

LANGUAGES

Spanish Native
English Advanced

EDUCATION

Full-Stack Coding Bootcamp Jan – Oct 2021
